OPTIMIZE YOUR
SOFTWARE DEVELOPMENT LIFECYCLE

Grow, reduce costs, speed time to market for your apps.

The biggest challenge in software development is delivering fast results whilst costs remain stable, and distractions are kept away from developers! Now, it is possible to **remove upfront capital investment** for infrastructure and licenses in your development lifecycle and move towards an OPEX model, where you pay for what you use!
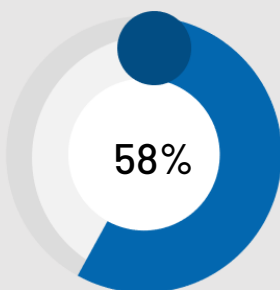

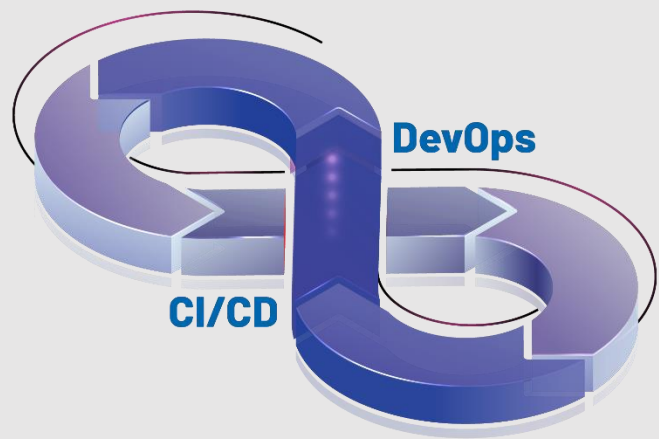

Furthermore, you will be future-proofing your operations by **using best-in-class tools**, infrastructure and services that allow **developers to focus on their primary task – creating great software products!**
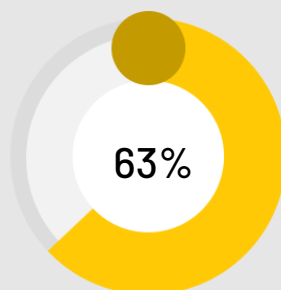

HOW DOES IT WORK?

Traditional development companies rely on multiple not interconnected tools for backend development and testing, which often causes disruptions and delays in the delivery!

By leveraging modern technologies like GitHub, integrated CI/CD and leading Azure infrastructure, you can now transfer the existing on-premises development environment to a cloud-based, pay-as-you-use infrastructure-as-a-service platform! No need to refactor your code.
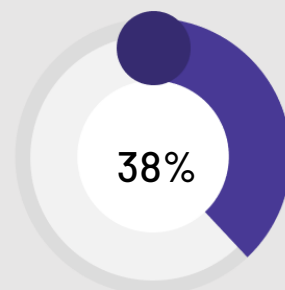

DevOps

CI/CD

Infrastructure as a Code in Azure will enable you to build apps more efficiently and productively, resulting in:

58%

63%

38%

58% faster time
to market for new products[1]

63% shorter time
to develop new applications

38% increase
in your profitability

BUSINESS SERVICES

By moving your development process to the cloud, you will immediately benefit from:

- Integrated and shortened development lifecycle
- Greater business agility
- Ability to seamlessly scale operations
- Global availability without technical obstacles
- Cost-optimized infrastructure
- Multi-layered, built-in security controls and unique threat intelligence

WHERE TO START?

We have refined a two-stage process to help development companies accelerate growth and ensure they can focus on creating great software with the best possible tools.

STEP 1:
Journey Roadmap

Our cloud architects will evaluate your current software development lifecycle and create a tailored roadmap with actionable steps for you.

STEP 2:
Implementation and Support

You can implement the roadmap by yourself, OR we can do it for you, whilst you focus on creating great applications. We will be happy even to provide you with support services thereafter.

HOW IS IT PRICED?

Roadmap Creation	1 500 EUR

Roadmap Creation	FREE
Roadmap Implementation Infrastructure costs (OPEX)	CUSTOM PRICE
Support (optional)	

Should you decide to take the whole journey with us, we will deduct the cost of the Roadmap Creation from your check.

WHY AZURE?

Microsoft Azure is a flexible cloud platform that enables you to build applications quickly and scale any part of them seamlessly.

With Azure, you will be equipped with the right solution to manage the development lifecycle efficiently, using the tools and frameworks of your choice. Azure supports open source technologies, so you can run virtually any application using your data source, with your operating system.

Below are the most important benefits, the Azure platform will bring to your business:

- Better cost-efficiency – now it is possible to start your project small, without any upfront investments and increase the usage only when needed! Moreover, no costs will be added if you decide to scale your operations down.
- Faster product time to market.
- Constant centralized infrastructure monitoring and backup.
- Borderless services – reach your customers anywhere in the world without the need for local infrastructure.
- Development teams are empowered to quickly create brand-new environments, ranging from databases to virtual machines.
- Constant access from everywhere to your environment and integrated backup
- Adherence with the highest security standards and regulations.

WHY TBS?

We are your trusted advisor with experience across every phase of the journey to the cloud! Our mission is to simplify the complex and help you be your best!

We have been around for 20 years, and we have dedicated software development, DevOps and Cloud teams. Our certified experts have plenty of experience across various platforms and automation and will support you along every step on the way to the cloud!
